

Ready to begin your new adventure with Glass Art?

Great! You're in the right place.

You can learn how to make something you never dreamed of making. We offer basic classes in both Glass Fusing, as well as, Stained Glass. In both classes you will learn the proper techniques for glass cutting, grinding and art design tips.

In our Glass Fusing basics class, you will also learn the elements of melting and bonding pieces of glass together in the electric kilns. After your glass is fused together you will learn the slumping process which is the shaping of your fused piece into something either functional or artistic.

In our Stained Glass basics class, you will also learn how to design a window or an art piece to fit your space, pattern use techniques and assembly and soldering of your stained glass design using lead came or copper foil techniques.

You will come away from both classes with glass items that you can say you created!!

Call the Vistas Recenter for current contact information. You can see from the photos we have a well-equipped studio with all the necessary equipment for all types of Glass Art.
